REASON FOR ALLOWANCE

1. Chandezon et al, Drieux et al discloses a tire comprising first bead having a seat the generatrix of which has its axially inner end on a circle of diameter greater than the diameter of the circle on which is located the axially outer end, and a carcass reinforcement formed of at least one carcass ply and anchored in said first bead to at least one annular bead anchoring element, and when said tire is mounted on its operating rim and inflated to its recommended pressure, the meridian profile of said carcass reinforcement has a tangent to the point of tangency of said meridian profile with said anchoring element of said first bead that forms relative to, the axis of rotation an angle open towards the outside at least equal to 70 degrees. Muhlhoff discloses a tire comprising a carcass reinforcement of at least one ply with a reinforcing ring element in the side wall of the tire. However, the continuing application date falls within the range of the filing date of the application. Lopez discloses a tire comprising a carcass reinforcement of at least one ply with a reinforcing ring element in the side wall of the tire. However, none of the references of record suggests a tire with a carcass profile having a tangent angle with the bead that forms an angle relative to the axis of rotation an angle open towards the outside of less than 70 degrees, wherein a rubber profile mix element in an lower sidewall extend radially and connecting the annular bead anchoring element with an additional sidewall ring while located axially to the inside of the axially outermost carcass ply in the manner defined in the instant claims 1, 21, -24 and in combination with other limitations of the claims. Therefore, claims 2-9, 11-12, 16 and 20, depending therefrom, are considered to be allowable.
